How do I find the MAC address on my computer?

Windows 7

1. Click the Start button.

2. In the Search programs and files field, type CMD and press Enter.

3. A black Command prompt window will open. Type ipconfig /all and press Enter. (Note the space between ipconfig and /all.)
4. Lots of information will be displayed, but you need the **Ethernet Adapter Local Area Connection** section. Write down the **Physical Address** that looks like "0A-B1-C2-D3-E4-F5". This is the "MAC Address."

---

**Mac OS 10.9.4**

1. From the Apple menu, select **System Preferences**....

![Image of System Preferences]

2. In **System Preferences**, from the **View** menu, select **Network**.
3. Default selection will be “Ethernet”. Click Advanced...

4. Click the “Hardware” tab. The MAC Address will be displayed.
